# ECO RUBBER COLORIZER LINE

ECO Green's Rubber Colorizer Line equipment is designed with automatic controls to accurately monitor colorant usage and to adjust colorant application rates and output. The system also can be outfitted with accessory equipment, such as a drying trommel, conveyors, feed bin and bagging stations.

Colors and capacities will vary based on color, mixture, and climate.

The ECO Rubber Colorizer Line is the industry's most efficient system with the highest coloring capacity on the market (up to 10,000 lbs per hour). Our line has the ability to color a wide range of material sizes from 10-20 mesh rubber granules to 1-inch chips and rubber buffings. This system is by far the most versatile and effective coloring line on the market!

COLORING LINE
